

How to start the true ring with the needle and ball thread

By Katia Vallée © 2008

Before you start, it is important to remember that all rings will be made with the needle thread.

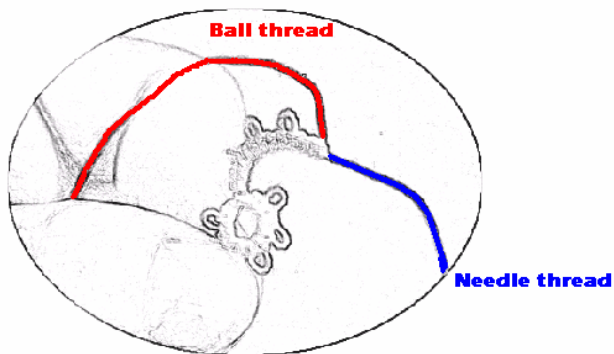

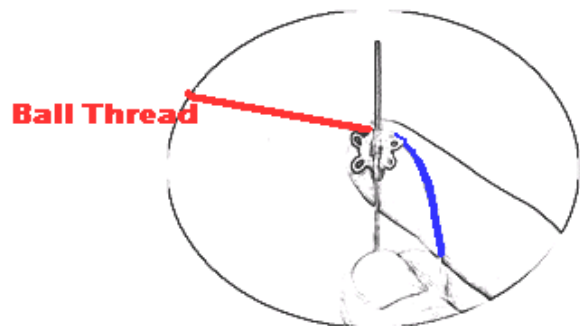

Start by leaving two arm spread of thread on the needle side (With time and practice you'll be able to leave a lot more than this.)

Fold the thread after the length of your arm spread and fold from there to make a loop hold that on the back of the needle.

Then to turn this loop like a page of a book, so that the thread which goes down to the ball is on the back and right side and the thread coming from the needle is in front and on the left side of the needle. Now you can start making the true ring.

When the ring is finish, you need to turn your work from right to left (like turning a page of a book). By doing this, you will put the ball thread in position to make the chain.

To make the chain you need to put the needle in the middle of the ring just made making sure that you make the ds with the ball thread and make the first ds as close as possible near the ring

When the chain is finish, again you need to turn your work from right to left (like turning a page of a book) By doing this; you will put the needle thread in position to make the ring.

Note that with the true ring and chain there isn't any Shoe lace trick to do between each element.
